AI Platform Engineer | AI Cloud Architect | Data Engineering | AWS | Python | SQL | RAG | LLM | Multi-Agent AI | FastAPI | Terraform

SUMMARY

AI Platform Engineer specializing in cloud-native data platforms that transform fragmented business data into actionable decision intelligence. Experienced designing production AI systems integrating Data Engineering, Retrieval-Augmented Generation (RAG), Multi-Agent AI, and cloud-native architectures to automate reporting and support business decision-making.

TECHNICAL STRENGTHS

Cloud & Architecture	AWS, Serverless Architectures, Event-Driven Systems, Distributed Systems, System Design, Infrastructure as Code (Terraform)
Data Engineering	Streaming Pipelines, ETL/ELT, SQL, PostgreSQL, AWS Glue, Amazon Athena, dbt, Data Warehousing, Workflow Orchestration
AI Systems & Reliability	Retrieval-Augmented Generation (RAG), Multi-Agent AI, Semantic Search, BM25, Reranking, LLMOps, Prompt Engineering, Model Deployment, Model Validation
Programming & Software Engineering	Python, FastAPI, REST APIs, Docker, Git, Linux
Reliability	CloudWatch, CI/CD, GitHub Actions, Observability, Validation Frameworks, Cloud Monitoring, SLO-Oriented Testing

EXPERIENCE

Independent AI Platform Engineer (2023–Present)

Delivered confidential AI and Data Engineering consulting engagements across digital media and professional services. Public AI platforms demonstrate reusable production architectures and engineering patterns developed alongside confidential consulting engagements.

Selected Client Engagements

Digital Sports Media Platform (Reference Available) | 2024-2026

Advertising, audience and content data were distributed across multiple systems, making reporting slow and limiting business visibility. Designed and implemented a centralized data platform automating reporting and supporting editorial and commercial decision-making.

- Consolidated multiple business data sources.
- Automated reporting and KPI generation.
- Contributed to approximately **25% advertising revenue growth**.

Property Valuation Business (Reference Available) | 2023-2024

Business reporting relied on manual processes, limiting operational visibility and slowing decision-making. Designed and implemented a centralized reporting platform that automated reporting and standardized business metrics.

- Automated operational reporting workflows.
- Standardized business performance metrics.
- Contributed to approximately **20% revenue growth over one year**.

Selected Platform Architectures

FlowPay — Market Risk Intelligence Platform

Financial institutions need to assess continuously changing market conditions in real time. Designed a cloud-native decision platform transforming streaming market events into actionable market risk intelligence.

- Delivered real-time market risk assessments with <5-second latency.
- Engineered an event-driven data pipeline orchestrating real-time market event ingestion and decision workflows.
- Designed specialized AI agents coordinating market analysis, evidence validation and recommendation generation.
- Implemented replay simulation, observability and validation frameworks supporting reliable production decisions.

CFO FinOps — Cloud Financial Intelligence Platform

Cloud financial data is distributed across multiple AWS services, making executive reporting difficult. Designed an AWS-native decision platform transforming fragmented cloud financial data into validated executive intelligence.

- Integrated cloud billing, usage and operational data into a centralized financial decision platform.
- Developed a grounded RAG workflow producing explainable executive financial insights.
- Implemented validation, monitoring and reporting capabilities supporting reliable financial decision-making.

QuantLab — Quantitative Research Platform

Quantitative investment decisions require multiple analytical stages beyond machine learning predictions. Designed a modular research platform integrating prediction, strategy selection, portfolio construction, risk management and monitoring.

- Engineered modular analytical pipelines covering market ingestion, strategy evaluation, portfolio construction and execution.
- Developed specialized decision engines supporting strategy selection, risk management and performance attribution.
- Integrated validation, explainability and monitoring across the end-to-end research workflow.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2026)
- FinOps Certified Practitioner (2025)
- Microsoft Power BI Data Analyst Associate (PL-300) (2025)
- Google Data Analytics Professional Certificate (2025)
- Data Analyst in Python (DataCamp) (2025)
- Generative AI – Strategic AI Leader (2025)

EDUCATION

- Université de Montréal (2012 - 2016) — Bachelor's Degree - Youth, Family and Community Intervention
- Franklin Pierce College (2001 - 2004) — Studies in Mathematics and Computer Science

ADDITIONAL LEADERSHIP EXPERIENCE

- Former professional soccer player (2004 - 2009) - MLS and Norwegian First Division
- Former Soccer Technical Director (2009 - 2018) overseeing a 1,500-member youth soccer organization
- Former high-performance coach at CF Montréal Youth Academy (2019 - 2025)
