AI Cloud Data Engineer | Production AI Systems | AWS | RAG | Multi-Agent Orchestration | AI Reliability

SUMMARY

AI Cloud Data Engineer specialized in production-oriented AI systems, cloud-native architectures, and real-time decision intelligence platforms on AWS.

Engineered end-to-end architectures combining real-time streaming pipelines, multi-agent orchestration, Retrieval-Augmented Generation (RAG), and cloud analytics to deliver low-latency, explainable, and production-grade decision intelligence systems.

Built complex systems involving Amazon Kinesis, AWS Lambda, AWS Step Functions, Athena, dbt, Terraform, Power BI, and AI-driven workflows focused on observability, validation, scalability, and business impact.

TECHNICAL STRENGTHS

Cloud & Architecture	AWS, Serverless Architectures, Event-Driven Systems, Terraform, System Design
Data Engineering	Streaming Pipelines, ETL/ELT, dbt, Athena, Glue, SQL, Data Modeling
AI Systems & Reliability	RAG, Multi-Agent Systems, Semantic Search, BM25 Retrieval, Reranking Pipelines
Analytics	Python, SQL, Power BI, Executive Dashboards, Financial Analytics
Reliability	CloudWatch, Validation Frameworks, Observability, SLO-Oriented Testing

EXPERIENCE

Independent AI Systems Engineering (2023–Present)

Designed and engineered production-oriented AI, cloud, orchestration, analytics, and decision intelligence systems on AWS focused on real-time processing, observability, validation, and reliability engineering.

- Designed and implemented production-oriented AI and cloud data engineering systems on AWS focused on real-time analytics and AI-driven decision intelligence.
- Built a real-time financial intelligence platform using Amazon Kinesis, AWS Lambda, and AWS Step Functions capable of generating low-latency risk-based decisions (<5 seconds).
- Developed a FinOps AI decision intelligence system integrating S3, Glue, Athena, dbt, Power BI, and Retrieval-Augmented Generation (RAG).
- Implemented multi-agent AI workflows, observability layers, validation frameworks, replay simulations, and SLO-oriented testing pipelines.
- Built analytics engineering and orchestration platforms involving dbt, ELT workflows, semantic retrieval pipelines, vector search experimentation, and cloud-native data processing systems.
- Provisioned infrastructure using Terraform and Infrastructure as Code principles.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (2026)
- FinOps Certified Practitioner (2025)
- Microsoft Power BI Data Analyst Associate (PL-300) (2025)
- Google Data Analytics Professional Certificate (2025)
- Data Analyst in Python (DataCamp) (2025)
- Generative AI – Strategic AI Leader (2025)

EDUCATION

- Université de Montréal (2012 - 2016) — Bachelor's Degree - Youth, Family and Community Intervention
- Franklin Pierce College (2001 - 2004) — Studies in Mathematics and Computer Science

ADDITIONAL LEADERSHIP EXPERIENCE

- Former professional soccer player (2004 - 2009) - MLS and Norwegian First Division
- Former Soccer Technical Director (2009 - 2018) overseeing a 1,500-member youth soccer organization
- Former high-performance coach at CF Montréal Youth Academy (2019 - 2025)
